

Rachel Morris

Business Partner for Operations and Programmes, AgustaWestland
SIG Chair - Project Systems

At AgustaWestland, Rachel's role is broad and varied. Working across the manufacturing, assembly, programme planning and facilities departments, she ensures that all parties' needs are met through the development and implementation of the most appropriate IT systems and solutions.

Prior to her move to Westland Helicopters, Rachel, then a system administrator, worked for six years in a project management environment using Artemis 9000ex. She entered the initial SAP Migration Project as a Project Systems trainer – a role that led her to educate more than 500 users.

Rachel is proud to have implemented SAP PS as the primary planning tool at AW supported by MSP, removing Artemis entirely from the user community – and this timely and often trying process is already proving beneficial, as the company and its users learn to appreciate and exploit SAP's functionality.

Currently concentrating on the all of the new functionality within ERP6 and looking to migrate and consolidate with AgustaWestland's Italian site.
