

Cloud Process – Stream Information

Suite/Platform

Time	Session	Company & Speaker
13:15-14:00	S/4 HANA This session will cover the S4/HANA platform what it consists of and how it can be deployed & extended through the cloud. We will cover the S4/HANA cloud architecture, and explore using HCP to extend the S4 on premise suite to the cloud.	Carl Streatfield SAP
14:05-14:55	Hillarys Blinds - on the Journey to S/4 HANA This session will describe the reasons for the move to S/4 HANA, the major milestones already achieved, the benefits that Hillarys are seeing and the lessons learnt.	Julian Bond, Hillarys Blinds Birchman Solutions
15:30-16:15	Running mission critical apps in cloud to boost global efficiency Organisations want to be able to securely move mission critical application workloads to and from on-premises and public/private cloud environments – all while maintaining high performance levels. This session will explore how Virtustream provides secure, multi-tenant cloud environments for enterprises and delivers assured SLA levels for their SAP applications and services.	Virtustream
16:20 – 17:05	Feasibility & Benefits of Running SAP on the Public Cloud AWS and Azure are driving significant disruption in the SAP Hosting market. In this session, Lemongrass will take you through the state of SAP on Public Cloud, the benefits that can be achieved, and how to create a capability to deliver savings of 50% and dramatically better service levels. Lemongrass will talk through case studies with Coca-Cola and Seaco for whom they have deployed productive SAP to AWS and share the experience and lessons learned.	Eamonn O’Neill Lemongrass
