

# Analytics Symposium

## Business Intelligence Breakout Stream Information

Time	Session	Company & Speaker
14:00	<p><b>Analytics Cloud from a BI perspective</b> Delivering new and emerging uses cases through SAP Analytics Cloud. This session will take you through how existing SAP BusinessObjects customers can extend into the cloud and how new customers can begin their information journey in the Cloud. The session will provide an introduction to SAP Analytics Cloud and then proceed to a demonstration of the core functionality.</p>	<p><b>Asad Mahmood</b> <b>Intelligence</b></p>
14:55	<p><b>Best Practices for upgrading to SAP BusinessObjects BI Version 4.2</b> Your complete guide to managing any update of the BI Platform. This presentation includes topics: Update rules, Repository &amp; Cluster Management, Reducing Downtime and Best Practices.</p>	<p><b>Matthew Shaw</b> <b>SAP</b></p>
16:05	<p><b>Alexa ask my Demo... Voice activated analytics dashboards</b> Helping us move towards the automated enterprise, Tim Nightingdale, an SAP BusinessObjects (BOBJ) legend has brought together voice activation with analytics to simplify access to data. Join Tim to see first-hand the demo and discover how to build a “skill” to interact with BOBJ. You will also have the opportunity to see the ‘Companion App’, providing users with the ability to interact and filter data across multiple screens at the touch of a single button. If you are a BOBJ user this session will take you beyond today’s applications of BOBJ and into tomorrow’s connected enterprise.</p>	<p><b>Tim Nightingale</b> <b>Bluefin</b></p>

## Business Intelligence Breakout Stream Information

17:00	<p><b>Move &amp; Maintain Business Objects on the Cloud</b> Increasingly, organizations are choosing to migrate applications and data to the cloud. Done well, moving to the cloud can yield numerous benefits, including lower costs, greater flexibility, and enhanced disaster recovery. Done poorly, moving to the cloud can reduce performance and put information at risk. More and more SAP customers are considering moving Business Objects to the cloud, in full or in part (hybrid). 360Suite recommends a 10-step process to successfully migrate Business Objects to the cloud, and a 7-step process to maintain it. The same set of 360Suite solutions enhance Business Objects before, during and after a cloud migration.</p> <p>Over the past several years, 360Suite has helped hundreds of organizations ease Business Objects upgrades and migrations, on-premise and on the cloud. In addition to easing the process, 360Suite solutions have a byproduct that is less quantifiable but no less important. By empowering IT to independently and transparently move Business Objects to the cloud, 360Suite reconnects IT and business in support of their shared goal-organizational success.</p>	<p><b>Patrick Perrier</b> <b>360Suite by</b> <b>GB&amp;SMITH</b></p>
