14:00	<p><b>WOW! Analytics at the frontier – NGN and the liberation of information</b></p> <p>Northern Gas Networks are on a journey of business evolution, designing Future Ways of Working that have data analytics at the absolute heart of everything we do. You can learn all about how:</p> <ul style="list-style-type: none"> <li>• We're making analytics open to everyone, through the Digital Operations Room</li> <li>• We're building an architecture that is simple, flexible and ready for anything</li> <li>• We're aligning processes to transform how we work, how we measure, how we learn.</li> </ul>	<p><b>Northern Gas</b></p> <p><b>Tom Pollock</b></p>
14:55	<p><b>SAP/Pure Universal Data Management Platform</b></p> <p>As data landscapes become increasingly complex, companies face the challenge of trying to manage the influx of both structured and unstructured data from multiple applications, files, databases, data warehouses, and data lakes. Today's Enterprise Architectures require combining all sets of data – whether big data, transactional data, or analytical data – into a single data universe. To meet these challenges, SAP has launched SAP HANA Data Management Suite, a complete end-to-end data solution based on SAP HANA, SAP Data Hub, and SAP Enterprise Information Management (EIM) technologies. It allows for secure, governed enterprise-class applications and analytics by providing an open, hybrid, and multi-cloud enabled solution suite that orchestrates all the data you need into a trusted, unified landscape. The Pure Storage Universal Data Platform provides all the storage services – block, VM, file, or object – needed to consolidate everything, whether databases, virtual machines, analytics, or webscale applications. It delivers Tier 1 data services to all workloads, and drives productivity with industry-leading data reduction, proven 99.9999% availability, non-disruptive everything, built-in data protection, global flash management, endless extensibility, and effortless simplicity. Software-defined via the Purity Operating Environment and 100% flash, the Data Platform includes FlashArray for block and virtual volumes, FlashBlade for file and object, and FlashStack for converged infrastructure solutions.
