| 09:00 | <b>Introduction &amp; Welcome</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | Mark Belmore<br>SIG Chair |
| 09:05 | <b>UKISUG Update</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | Jakob Harrison<br>UKISUG  |
| 09:10 | <b>Roundtable Discussion</b><br><br>Partnerships between business and IT, clearly defined roles and responsibilities and data literacy are increasingly considered as critical components of any outcome-based data strategy. To generate the business benefits from data management, it's not simply a function of one part of the organisation but requires many different data voices and data citizens from various parts of the business and IT. In this roundtable session, we will discuss best practices and lessons learned on how to define the right approach to effective data partnerships. Attendees will share their views and experience on how they've organised their data programs including their data literacy approach and how they've defined the roles required to influence, shape and delivery their data strategy | All                       |
| 09:40 | <b>Why Data Archiving is Critical for Information Governance</b><br><br>What are the requirements of modern Data Governance and why is archiving such an important part of the equation?<br><br>How can you strike the right balance between reducing overall TCO of the SAP data environment with the need to implement and enforce data retention policies and comply with Data Governance programmes?<br><br>When implementing a Data Governance strategy, organisations often overlook the need to include a digital archiving solution for the long-term retention and preservation of data. This is crucial to ensure compliance with data privacy laws and other business regulations. But how do you achieve this in practice?                                                                                                       | Steve Pierce<br>TJC Group |
| 10:10 | <b>Comfort Break</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | All                       |
| 10:20 | <b>What's your 'Enterprise Data Strategy' to become data driven enterprise?</b><br><br>The data risk in digital transformation projects is growing rapidly. Every organisation wants to become digital and data driven enterprise, but only few succeed. Did you know that 4 out of 10 transformational initiatives fail to achieve their expected outcomes, simply due to data not being fit for purpose?                                                                                                                                                                                                                                                                                                                                                                                                                                   | SAP                       |

# Document & Data Management

## Online SIG Meeting

Thursday 9<sup>th</sup> September 2021

### AGENDA

A data strategy helps by ensuring that the data is managed and used like an asset.

Are you on the journey to become data driven enterprise and have questions like these unanswered?

- What is a comprehensive enterprise data strategy?
- Where do we start and what it takes to deliver a data strategy?
- Is it just about tools and architecture?
- How can I align my data strategy with business strategy?
- How can SAP help with enterprise data strategy when I have mixed landscape?
